ENERGY FOR THE FUTURE XIX.

Energy efficiency in the industrial sector for company growth

Venue: Hall P, room P4, sections c+d
Expert supervisor: prof. Ing. Jiří Tůma, DrSc., ČVUT Fakulta elektrotechnická
Organiser: FCC Public, s. r. o., Pod Vodárenskou věží 4, 182 08 Praha 8
Ing. Emil Širůček, tel.: +420 603 847 023, e-mail: public@fccgroup.cz

Programme:

- Energy costs are increasingly influencing production costs. Since energy cannot be completely replaced, only one option remains - to optimize and streamline its use.
- Companies that take this into account in their strategic planning reduce their operating costs, usually in several months or years, and thus they gain a significant competitive advantage. Efficient energy use should be primarily addressed by companies whose production costs are affected by energy costs with more than 3%. This category includes many small and medium-sized companies.
- Efficient energy use in industry can save about 10% of the energy in the short term, while another 15% can be saved in long-term interdisciplinary projects. Return on investment in energy efficiency and other processes is very fast, the measures often pay for themselves within the first three years. The spectrum of measures ranges from simple structures secured in-house to comprehensive energy efficiency projects, whose implementation requires a helping hand, usually by companies providing energy or advisory services, and of course first-hand information from suppliers of technical equipment.
- A conference focused on energy-saving options will present specific ways to improve the energy balance of a company through measures in production and facility management, setting them into a broader technical and legislative context.
- Participation is free of charge after Registration
- Programme is available on www.odbornecasopisy.cz

Programme:

10.00 - 10.05	Opening of the seminar, word of introduction
10.05 - 10.35	Smart sensors for smart factories, A connected factory starts with the most basic elements of process automation
10.35 - 11.05	New trends in industrial flow measurement
11.05 - 11.35	Vibration Measurement
12.00 - 12.30	New trends in industrial measurement of level, pressure and temperature
12.30 - 13.00	Leak measurement
13.00 - 13.30	Predictive maintenance systems - the onset of sensors 4.0
13.30 - 14.00	Specialities from Fuji Electric process instrumentation
14.00 - 14.30	Fitting the factory with field instrumentation

Current industry requirements in connection with the deployment of modern technologies are placing greater demands on measurement and interpretation of data from production and their subsequent use in process control. The seminar will mainly focus on common and less common techniques of measurement and control with the greatest emphasis on variables such as temperature, pressure, level and flow. Participants will gain a comprehensive overview of new trends in the field of industrial measurement and control.

Registration for the seminar is free. For more information, visit: <http://www.konference-tmi.cz/Programme24.html>
